Professional Summary

GIS Analyst with 6+ years of experience delivering ArcGIS Pro applications, Python/arcpy automation, and geodatabase/ETL management for client-facing engineering programs. Skilled in translating stakeholder requirements into production geoprocessing workflows and applying AI tools (Anthropic Claude) to accelerate GIS automation and documentation. Experienced managing GIS delivery across multiple concurrent accounts, with a strong customer-service orientation. MSc in Civil Engineering (University of Washington) and a BSc in Geological Engineering.

Skills

- **GIS Software:** ArcGIS Pro, ArcGIS Desktop, arcpy, QGIS, ArcGIS Online
- **Geoprocessing Automation & ETL:** Python (arcpy, GDAL, GeoPandas, Rasterio), automated pipelines integrating GIS platforms with internal systems, raster/vector QC
- **AI-Assisted GIS Development:** Anthropic Claude Code for building, documenting, and automating GIS tooling
- **Data & Formats:** Geodatabases, metadata standards, GeoJSON, GeoPackage, Shapefile, DEMs, CRS, SQL
- **Project & Client Management:** Requirements gathering, GIS delivery across multiple concurrent accounts

Experience

Staff Engineer – GIS & Remote Sensing (July 2025 – Present)

Shannon and Wilson Inc. 

- Act as GIS project engineer across multiple concurrent client accounts, gathering stakeholder requirements and translating them into production ArcGIS/GIS workflows and mapping deliverables, including 97 layers across 10 sites for one program.
- Build Python/arcpy ETL automation for raster sampling and map-series export in oil and energy sectors, and lead development of SWLC3D, a Python (arcpy, GDAL, GeoPandas, Rasterio, Cloudcompy) LiDAR change-detection pipeline with automated QA validation.
- Use Anthropic Claude/Claude Code to accelerate GIS tooling, documentation, and internal reporting automation.

Research Assistant & Geospatial Scientist (August 2023 – June 2025)

University of Washington 

- Built Python geoprocessing workflows (GeoPandas, Rasterio, GDAL) integrating satellite imagery, elevation data, and vector datasets; presented technical geospatial findings to non-technical research and agency stakeholders.

GIS & InSAR Monitoring Analyst (July 2021 – August 2023)

Hexagon Geospatial 

- Delivered real-time geospatial monitoring and client-facing reporting for mine and dam-safety accounts across Latin and North America, providing technical support and maintaining data quality across multi-sensor geodatabases.

Geological Engineer – GIS & Resource Data Management (January 2019 – July 2021)

South32 

- Managed GIS geodatabases and metadata standards for mineral resource estimation, coordinating field data collection and producing deliverables for decision-making.

Education

- Master of Science in Civil Engineering
University of Washington
June 2025
- Bachelor of Science in Geological Engineering
Universidad Nacional de Colombia (UNALMED)
May 2019

Awards & Certifications

- InSAR Processing and Analysis (ISCE+) – EarthScope Consortium & NSF, August 2024
- CEE Departmental Graduate Fellowship – University of Washington, September 2023
- InSAR and RAR Radar Monitoring – University of Arizona, December 2020
